

Customer Support: Response & Routing Policy

Orange Caterpillar Pvt Ltd · Customer Operations · reference document

Your task

Twenty-five customer messages have arrived across email, chat, and the web form. Read each one, work out what it is about and how urgent it is, set a priority, route it to the right team, and draft a reply. Order the queue so the customers who need us most are handled first. Nothing is ever sent without a human.

How priority is set

Priority comes from what the customer needs and how much is at stake:

- Urgent: a legal or public threat, a VIP at risk of leaving, or a VIP with a hard deadline.
- High: a customer at risk of leaving, an angry customer, a high-value customer, or a time-sensitive request.
- Normal: a standard request that needs a look-up or an action.
- Low: a simple enquiry or how-to that a short answer will settle.

One hard rule: any message that threatens legal action, a regulator, a chargeback, or going public is treated as Urgent and routed to the Escalations team, whatever else it says. Nothing is auto-sent, the agent drafts a reply and a human approves it.

Routing table

Each line below maps a request type to a team.

ROUTE: Billing | Billing
ROUTE: Orders & Delivery | Fulfilment
ROUTE: Returns & Refunds | Returns
ROUTE: Account & Access | Account Support
ROUTE: Product Issue | Technical Support
ROUTE: Cancellation | Retention
ROUTE: General Enquiry | Frontline Support

Response targets (SLA)

Each line below maps a priority to its response target.

SLA: Urgent | Respond within 1 hour
SLA: High | Respond within 4 hours
SLA: Normal | Respond within 1 business day
SLA: Low | Respond within 2 business days
