

Z E V A R

Every gram, *accounted for.*

Fine jewellery with a live price breakup, BIS and IGI certification, and a lifetime buyback. Trust, to the last decimal.

THE PROBLEM

Buying fine jewellery is an act of blind trust.

It is one of the largest purchases a family makes, and the least transparent.

HIDDEN COST

Opaque making charges

The final bill hides a large making charge you cannot question, and the gold rate is rarely shown clearly.

PURITY DOUBT

You cannot verify it

Is it really 22K? Is the diamond what they claim? Most buyers simply have to take the seller's word.

COLD AND COSTLY

Expensive, intimidating

The trusted big brands feel pricey and formal, and the local jeweller runs on relationships, not clarity.

THE SOLUTION

Fine jewellery, fully transparent.

Zevar removes the guesswork. You see exactly what you pay for, and you can prove it.

OPEN PRICING

A live itemised price

Gold weight times the live rate, the making charge, the stones and the tax, shown in full on every piece.

CERTIFIED

Hallmarked and graded

BIS hallmarked gold with a verifiable HUID, and IGI certificates on every diamond.

PROTECTED

Lifetime buyback

Bring any piece back any time and exchange it at fair, open value. The worth stays with you.

HOW IT WORKS

From a piece you love to a price you trust.

01

See the piece

Browse the collection, each piece photographed and described in full.

02

See the full breakup

The live, itemised price opens before you decide. Nothing hidden.

03

Verify the proof

Check the BIS HUID and the IGI certificate yourself.

04

Buy, with buyback

Purchase or book a viewing, backed by lifetime buyback.

THE MARKET

A vast market, built on trust and gold.

\$95B

India jewellery market in 2025, growing toward about \$150B by 2034.

~49%

of that is gold, the cultural and financial heart of Indian jewellery.

40-60%

cheaper, IGI-certified lab-grown diamonds, the fastest-opening niche.

Sources: Grand View and IMARC (jewellery market), IBEF (gems and jewellery), MarkNtel (lab-grown diamonds). Online is led by CaratLane, BlueStone and Tanishq.

Trust is the product. Repeat is the return.

Where the value is

- Gold margin is thin so the edge is trust, service and the making charge, shown openly.
- Diamonds carry more roughly 3 to 5 percent higher margin than plain gold.
- Lab-grown widens reach modern, certified, far lower ticket, higher margin.
- Transparency converts a clear price closes the anxious, considered buyer.

Why it compounds

- Buyback locks loyalty the customer returns to upgrade and exchange.
- Certificates earn referrals trust is the most shared thing in jewellery.
- Gifting repeats weddings, anniversaries, festivals, year after year.

Illustrative model for a student build, not audited results.

TRACTION

Early trust, earned piece by piece.

35

pieces sold, every one with its full price breakup and certificate shown.

8 of 10

buyers returned to browse again or referred a friend.

~₹24k

average order value, with diamonds and lab-grown leading.

Illustrative early traction for a student pilot, to show the model.

WHY NOW

Transparency is no longer optional.

Why now

- Certification is mainstream HUID codes and IGI certificates are now expected, not exotic.
- Buyers shifted online high-value jewellery is bought digitally, with try-on and proof.
- Lab-grown opened the door a modern, affordable, certified entry point the old brands are slow on.

Where Zevar wins

- vs the local jeweller total clarity instead of vague making charges and purity doubt.
- vs the big brands a sharper, younger, fully open brand built around the price breakup.

THE ASK

Help us earn the first thousand customers worth of trust.

100

founding customers for certified, transparently priced pieces.

A jeweller

a trusted karigar or jeweller partner and a retail mentor.

Capital

working capital for a small, certified starter inventory.

Every gram, accounted for.
